

## We've Got You Covered

Tapered or Straight Valve Caps

A leader in the product protection industry for 60 years, Caplugs offers the world's largest stock of plastic caps, plugs, wraps, edge liners, netting and tubing. Our full line of caps includes threaded, non-threaded, tapered, straight, tear-tab, flexible vinyl, rigid IDPE and more. The post valve sleeve joins a wide array of Caplugs products currently used to protect your gas valves and cylinders:

Tear-Tab and Tamper Evident Valve Caps

Threaded or Non-Threaded Caps for Tank Valve Connections

Threaded and Non-Threaded Tank Valve Plugs

Cylinder/ Tank Netting

## Custom Solutions

At Caplugs, we have the tools and experience to offer extensive custom design capabilities in-house. We provide engraving and pad printing, allowing you to advertise your company name and logo directly on the sleeve. And, with our color customization, you can color match the sleeve to your company colors. Caplugs' engineering, tooling and manufacturing capabilities allow us to create a part in different materials and designs to fit your unique needs. When you need the perfect custom solution for your product protection, you need Caplugs.

Easy Installation • Secure Fit • Superior Protection

## Breathe easy with Caplugs.

At Caplugs, we know that your job doesn't end once an oxygen cylinder is filled. You are also responsible for applying the proper protection to the post valve to ensure the cylinder arrives to the end-user with no damage, contamination or tampering. That's why you need reliable valve protection you can count on.

Caplugs, one of the world's leading manufacturers of plastic product protection, has specially engineered a superior solution for oxygen post valve sleeve protection. Our patent-pending sleeves go on quickly and easily, saving you time and labor while providing excellent protection.

## You fill it. We'll protect it.

Caplugs' oxygen post valve sleeves slide easily over the post valve after a cylinder has been filled with oxygen gas. It protects the post valve from damage and contamination, and is designed to remain locked into place through transit until the end-user removes it. Only from Caplugs.

Easy on\*

Stays on

Easy off

## A step ahead of the competition

The Caplugs oxygen post valve sleeve was specifically designed to give you a better alternative to the products currently used in your industry. Other products are typically:

Time-consuming and difficult to install

- Require threading of small, intricate parts
- Require pre-soaking, drying time or heat guns
- Require two hands to install

Poor fit and unreliable protection

- A loose fit on the post once installed
- Risk of falling off during handling or while in transit
- Are vulnerable to tampering and unsanitary conditions
- May become brittle when exposed to cold, heat or sunlight

Our Caplugs' post valve sleeves were engineered to meet these problems head-on and provide you with a unique solution for superior protection.

Superior protection that saves you money and labor.

\* The post valve sleeves are not intended to be a lifting or carrying device. We do not recommend you lift the cylinder/tank by the valve or the valve sleeve.

## A smarter design. A better solution.

### SVS-1

Translucent design allows visibility of valve stem

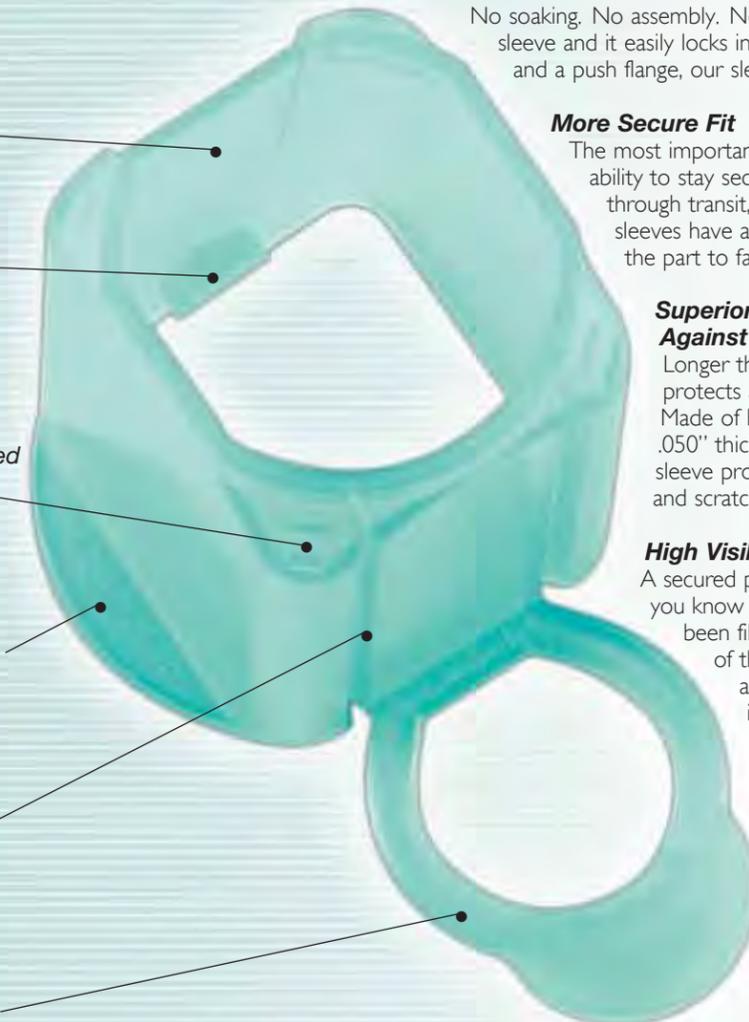

Locking bead

Ergonomic contoured grip corners

Flanged sides for push-on installation

Tear-tab for easy removal

Large, finger-sized pull-tab

### Quicker/Easier Installation

No soaking. No assembly. No problem. Simply push on the Caplugs sleeve and it easily locks into place. With unique top grip corners and a push flange, our sleeve can be installed quickly and easily.

### More Secure Fit

The most important element of a post valve sleeve is its ability to stay securely on the post valve from installation through transit, until it reaches the end-user. Caplugs' sleeves have a unique locking bead that will not allow the part to fall off during handling or transit.

### Superior Protection Against Contamination

Longer than other valve sleeves, Caplugs' sleeve protects a much larger area of the post valve. Made of heavy-duty polyethylene material with .050" thick walls, our oxygen compatible valve sleeve provides greater protection from nicks and scratches against the valve surface.

### High Visibility

A secured post valve sleeve lets you know that a cylinder has been filled. The long length of the Caplugs valve sleeve allows you to easily identify from a distance that a post has a sleeve and the cylinder is full. We also stock the valve sleeve in opaque white for an even higher visibility option. Or choose from a wide range of colors for tank coding and age designations.

### Tamper Evident Protection

Once the sleeve is removed, it cannot be placed back on the post because the tear-tab will be torn. This reduces your risk of delivering a tank that has been used or tampered with.

### Easy Removal

The large pull-tab was designed with the end-user in mind. We've made the tab finger-sized with ribs, making it easy to grab and hold on to. The unique tear-tabs are designed to stay intact during handling and transit, yet tear easily for the end-user. The result is a reliable and durable sleeve for you and a convenient, user-friendly sleeve for your customer.

### Money-Saving Protection

Our post valve sleeve not only performs better, it's competitively priced. Plus, because our sleeve is so easy to use, it will save you efficiencies on installation labor, increasing your production rate. Parts are in stock and ready to ship.

### Universal Fit

One part does it all! Caplugs' sleeve is designed to fit all "standard medical cylinder post valves" and will not interfere with the "safety relief device."

### SVS-2W

Our SVS-2W design can accommodate a washer while providing the same superior protection, secure fit, easy installation and removal as SVS-1, saving you time and labor.

Accommodates washer
